

## Optimize Your Temperature-Sensitive LTL Shipping with Echo's Refrigerated Consolidation Solution

With faster transit time, lower cost, and reduced risk of damage, Echo's innovative solution provides numerous advantages over traditional refrigerated LTL service offerings in the industry.

### Echo's Solution Provides Multiple Benefits That Improve Efficiency and Reduce Costs

#### Faster Transit Time

- We leverage load-to-ride transportation by loading freight onto a truck and taking it directly to its destination
- Additional freight pick-ups occur near the same origin or along the route to the final destination

#### Lower Cost

- During transit, there are no stops at terminals, which reduces out-of-route miles and total mileage overall, leading to a lower cost
- No terminal stops and no need to unload and reload freight during transport results in less overhead cost

#### Reduced Risk of Damage

- Freight remains in the same trailer and within the care of the same driver throughout the duration of the trip
- Since there are no stops at pool points to reconsolidate, there is less handling of freight overall, which reduces the potential for freight to get damaged

### Leverage Our Industry Expertise, Established Relationships, and Exceptional Service

- Our team of experts will help you rethink the way you transport your temperature-sensitive LTL shipments
- We have standing delivery appointments at nearly all national and regional grocer distribution centers
- Delivery appointments are confirmed before pick-up
- We take a proactive approach to exception management by identifying and resolving most issues before pick-up

With our refrigerated consolidation solution, we provide consistent, quality service that ensures your food & beverage shipments arrive quickly, securely, and cost-effectively.

Contact an Echo representative today to book your next temperature-sensitive LTL shipment using Echo's refrigerated consolidation solution.
